- AB - J09165465 A volume-reducing agent for expanded polystyrene is composed of esters of dibasic acids which collapses cell membranes when contacted with the expanded polystyrene to form compressed polystyrene containing gel-like substance and is capable of transportation.
- Also claimed are: (1) a method of reducing volume of expanded polystyrene comprising using the volume-reducing agent in the form of a liquid to chemically solvate cell membranes of expanded polystyrene, thereby collapsing the expanded polystyrene; and (2) a method of separating polystyrene from the volume-reducing agent comprising: (i) spraying alcohols on polystyrene whose volume is reduced by using the volume-reducing agent; (ii) stirring and comminuting the polystyrene; (iii) extracting the volume-reducing agent to form polystyrene gel; and (iv) heating and melting it to separate the residual solvents, thereby recovering polystyrene in the form of ingots or pellets.
- ADVANTAGE - Expandable polystyrene can be compressed easily, contributing to easy recycling of expanded polystyrene.
